

Live streaming of breath in charts.  
Changes should be reflected in charts almost instantaneously.

Must have:

Left and Right Nostril data overlapped with ideal charts for Ida & Pingala

Color of graph will change based on breathing pattern compared with physical activity: e.g active breathing while running is good but might not be good while person is stationary; it might be a suggestion of mental stress and should be regarded as warning.

Red: Alert to User

Blue: Neutral

Green: Good

Good to have:

Calendar integration which ties up Ida & Pingala cycles with Moon cycles.

Good to have:

We dont have capability as of now to give suggestions. But would be good to have in future.

I think for now our goal should be live streaming and basic diagnosis

For first version. We will just do Live streaming of breath in charts. Changes should be reflected in charts almost instantaneously.

Must have:

- Showing if Ida/Pingala is active.

Good to have:

- Left and Right Nostril data overlapped with ideal charts for Ida & Pingala

Color of graph will change based on breathing pattern compared with physical activity. e.g active breathing while running is good but might not be good while person is stationary; it might be a suggestion of mental stress and should be regarded as warning.
